Version 8.0

Release Note

Product: Kulcha
Date of Release: Sep 17, 2021

Completed feedback from Asana

5. Venue Map: The Map on the Venue page should use the Kulcha Map not Google/Apple.
6. Map: Remove names of Google Locations and Add Kulcha location names
7. Map: Showing favourites and not the list results
8. Discover Friends: Can see yourself.
9. Adding Venue to Newly created List

10. Saved for Later: Need to be able to add an image
11. Map: When I go to the Map View, it takes me to the centre location. It should take me to the first location on the list
12. Notifications: Not going away
13. Profile: When you scroll to the bottom of someone's recommendations, you receive an error
14. Error messaging: Too quick
15. Facebook: Registration is opening in browser and not App
16. Restaurants: Can't Find
17. Map: Can't see my personal location on a map when I view
18. Explore Results: The distance shown is from the search "Location" i.e. Bondi. It should be from where you are at that current point in time.

Enhancement and fixes

1. Distance from user's location is not showing when venues are fetched from Foursquare i.e. Everyone/Popularity/Nearby
2. Taking time to load searched addresses in Search > All sections.
3. Taking time to load venues in map when change filters

App Installation Guide

Steps to install iOS:
1. We will add a user Apple ID email in iTunes connect. iTunes invitation email will be received then accept the invitation.
2. Install Testflight app from App store.

3. We add in the Testflight tester group. Testflight invitation email will be received then flow the instruction in the email. Click the "View on Testflight" option to download the app.

Steps to install Android:
APK installation process:

Once you have downloaded the app from the given link tap on downloaded files. It will provide an alert with the option: "Open with".
Select "Package Installer"
Once selected the app will start downloading.

Once downloaded to install the app you need to enable "Unknown Apps" from settings. Please follow the below mentioned procedure to enable it.

ENABLE "UNKNOWN APPS" ON ANDROID 8 (OREO) AND LATER
Go to Settings > Apps.
Tap Menu icon > Special access.
Toggle Install Unknown Apps to the On position. [If you have opened link from chrome then select chrome or the application that you opened the link]

Version 2.0

Release Note

Product: Kulcha
Date of Release: Mar 22, 2020

Release Features

*This Version release satisfies all business requirements for **Kulcha** including different features in the app, accessible by an app user.*

Features of the release:

1. **Explore Module**

    Under this section, explore module has been covered allowing users to explore different places based on category, recommend places, view places in map, filter places by friends/everyone and sort by nearby/popularity. Following are the features Implemented as per plan:

    - Select location
    - Select category
    - Show recommended places list
    - Show recommended places in map
    - Manage markers
    - Bottom scroll list of places
    - Filter explore section
    - Sort explore section
    - Show places details
    - Gallery view of places photos
    - Show experiences listing of users for that place
    - Contact place
    - Show direction to place

2. **Update Profile details**

    End users edit account details including name, about me and can also change phone number. Following are the features implemented as per plan:

    - Update profile
    - Change mobile number

3. **Search Module**

    This feature allows users to search places and people, view recent searches and remove search data. Following are the features implemented as per plan:

- Search all places and people
- Show search results
- Recent search result
- Remove recent search

Known Issues and Problems

1. No Name of place is displaying in map view in location pin
2. No Location pin is showing heart shape icon when user has saved location as favourite in map view
3. No all contacts are listing when same contacts are used as multiple accounts in device
4. Logged in user profile photo is displaying in the explore place list
5. Quota Exceeds issue when user hits foursquare API (The daily call quota resets each day at midnight UTC. If you are over the daily call quota limit, the Foursquare API will return a 429 error until the time of reset.)
